

GREP

GREP

- Search file for string
- Example: `grep word filename`
- Matches any occurrence, to search for whole words:
 - `grep -w word filename`
- Options:
 - `-i`: ignore case
 - `-r`: recursive

Wildcards

- Expand filename to any matching pattern
- Wildcards:
 - *: any number of any characters
 - ?: any single character
 - []: character class or range(includes [:upper:], ...)
 - !: can be used to specify complement
- More details: man 7 glob (on linux)
- globbing: pathname expansion
- commands only see list of matching filenames
