

Bash Arguments

Arguments

- aka positional parameters
- reference by `${n}` - where n is the position
- `$0` - expands to command used to call program
- `$1`, `$2`, et. are 1st, 2nd, etc. arguments on the command line
- need to use braces for numbers with more than 1 digit, i.e. `${10}`

Arguments (continued)

- \$# -> total number of arguments
- @\$ -> array of arguments
- \$* -> string with arguments separated by space
